

# Touchscreen M-COATING®

state-of-the-art shaft coating

**64 GB** SD-CARD  
All data are stored on an SD card

## Automated shaft coating by the M-COATING process using the highest level automation.

### Characteristics:

- All components graphically displayed
- Intuitive operation
- highly reliable
- Operational safety for staff, equipment and the environment
- M-COATING operator handbook, QA handbook, connection diagrams and operating instructions clearly laid out

### The latest development using touchscreen with integrated Smartwire facilitates:

setting up and operating the process, monitoring, plotting and recording all stages. Data are stored and a read-out can be produced.

Optimisation of the cleaning and coating procedures with simultaneous monitoring of all electrical components gives you total command of site operations. You are in a position to provide your client with a precise record of cleaning and coating times, depth of shaft and quantity of mortar used for each shaft.

Engineering products and processes for the construction and renovation of drains, sewers, pipes, tanks, roads, industrial floors & anchors
